Problem Statement:

- If a person wants to detect gas in industry/home so that gas leakage can destroy/burn the entire industry/house if there occurs a small flame.
- If anyone needs know about gas leakage when he is in outdoor to avoid explotion when he is away.
- To govern the gas when no one is available in the industry like off time of the industry.
- To monitor the gas leakage in the company because to avoid explosion which causes more damages around the company.
